3.5 mm RF Connector

A 3.5 mm RF connector is a type of coaxial connector commonly used in radio frequency (RF) applications. It is also known as an SMA connector, which stands for SubMiniature version A. The 3.5 mm RF connector is designed to transmit high-frequency signals with low loss and minimal reflection.

The 3.5 mm RF connector has a threaded coupling mechanism that allows for a secure and reliable connection. It is commonly used in microwave applications, such as in test and measurement equipment, as well as in communication systems and radar systems.

Part No	Part Name	Frequency
43-001	3.5 mm plug for zla480g cable	34 GHz

Part No	Part Name	Frequency
43-002	3.5 mm plug for rg405 cable	34 GHz

Part No	Part Name	Frequency
43-003	3.5 mm plug for zla520g cable	34 GHz
