SMA connectors are a type of coaxial connector that was developed in the 1960s for use in high-frequency microwave and millimeter-wave applications. They are named for their screw-type mating mechanism, which allows for a secure connection between two SMA connectors. SMA connectors are commonly used in a wide range of applications, including telecommunications, networking, military and aerospace, medical equipment, and more.

Features:
Thread coupling mechanism
Crimping or soldering contact
50 impedance up to 18GHz
Light weight,compact design
Anti-vibration performance
